

## KEY BENEFITS

23% | REDUCTION  
in operating costs

19% | INCREASE  
in throughput

TRAINING | REDUCED  
just 15 mins for new staff

PAID | FOR ITSELF  
in less than 12 months

## GRIFFINS FIND WAREHOUSE SOLUTION TO THEIR TASTE

As a high velocity FMCG company, Griffins understands the importance of efficient warehouse management. They installed their first Warehouse Management System (WMS) back in 1994 and ten years on the business had outgrown their aging system. Changes in the FMCG industry have seen increasing order sizes from supermarket chains and, at the other extreme, convenience stores ordering more frequently with smaller order sizes.

In order to grow the business, Griffins needed a new system to manage the diversity in order size more efficiently, improve customer service, and meet the increasing demand for carton level tracking.

With Interlogic they found the solution they were looking for – MULTI PICK®, a locally developed warehouse management system that offered the flexibility and smart processes to give them the edge. The team at Interlogic proactively found innovative ways to streamline processes that led to unexpected savings.

MULTI PICK® enabled Griffins to integrate existing material handling equipment, reduce costs, enhance warehouse utilisation, increase efficiency, improve safety, and respond to customers changing demands.

## FEEDBACK

"We chose Interlogic because they are a logistics solutions company who had tremendous knowledge in logistics and logistic technology. We already had a warehouse management system but we needed to take the next leap. Interlogic certainly delivered it. The system paid for itself in less than 12 months - much less than we expected."

Tom Rosentreter, GRIFFINS SUPPLY CHAIN MANAGER

## MULTIPICK®3 WAREHOUSE MANAGEMENT SOFTWARE

### THE CONVENIENCE OF BATCH PICKING

Convenience outlets are notorious for making small orders that are needed urgently.

The batch picking flexibility of MULTIPICK® makes fulfilling these orders quick and easy.

Small orders are combined and Picked in Batch to optimise picking and presentation for delivery.

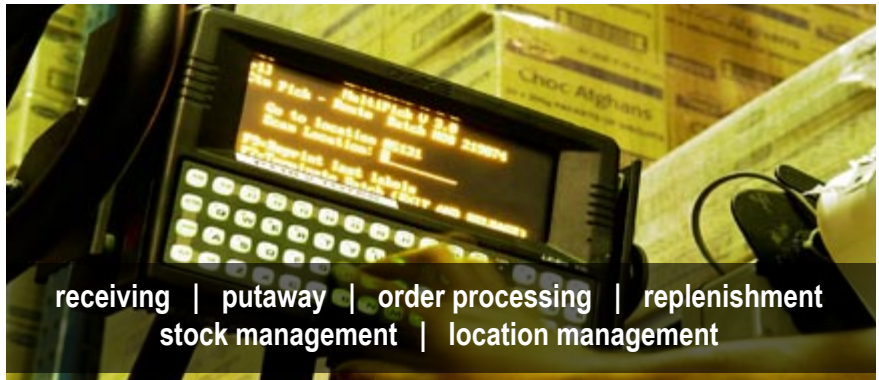

Each carton is given a delivery label and a unique number for tracking throughout the delivery process.

Now an operator can be picking up to 30 orders at one time in one pass of the warehouse, labelling each carton as they go, efficiently, effortlessly, and error-free.

### WHEN IT COMES TO INCREASING EFFICIENCY TO TAKE ON GROWTH, INTERLOGIC AND MULTIPICK® ARE THE PERFECT PARTNERS

Designed from the ground up as a multi-tier warehouse management system (WMS), MULTIPICK® draws on hundreds of man-years of logistic system experience and has been fine-tuned in more than 30 installations.

MULTIPICK® is a modular system with flexibility built in so it can handle any conceivable situation in any possible location. As your company grows and it's requirements change, MULTIPICK® grows and changes with you.

MultiPick's strength is in its ability to be adapted to a wide range of picking methods and technologies, from simple single order picking using paper through to batch picking from multiple streams and consolidating all streams post dispatch including batch picking trolleys and carousels. Orders can be configured as to when stock is allocated, commence picking, and method of picking.

Other features include: stock ownership, transaction ownership, multiple warehouses, permissions based security, KPI reporting by operator and equipment

Specifications: Multi-tier application, Windows 2003 Server, SQL Server 2005 standard or Enterprise, Radio Frequency terminals 900 MHz or 2.4 GHz

## ABOUT INTERLOGIC

First and foremost, the team at Interlogic are logistics people and they look at your business from a logistics perspective. Everyone from their software developers to their wireless specialists spend time on the warehouse floor so they have first-hand knowledge of the challenges your business faces.

A 100% owned New Zealand company, Interlogic has 18 years experience designing and installing intelligent logistics systems in the New Zealand Market. These include industrial strength wireless systems, warehouse management systems, and advanced material handling equipment.
